

LABVANTAGE[®]
Laboratory Knowledge. Delivered.

LABVANTAGE Data Services

The goal of data integration is to make all data – regardless of its source – work together.

LABVANTAGE is committed to pioneering data services and solutions that efficiently and intelligently integrate laboratory data for organizations of any size. Whether you need enterprise-quality data integration software, ETL training, accelerator kits for working with our world-class LIMS systems, or are looking for assistance in meeting your data integration and data migration objectives, LABVANTAGE provides the right data services for your business.

LABVANTAGE INTELLIGENCE READINESS ASSESSMENT

The Laboratory Intelligence Readiness Assessment service is focused on organizations that desire to implement a laboratory intelligence program but would like expert guidance on how to do so. The service will assess an organization's readiness to implement a laboratory intelligence program, provide recommendations, and a high level project plan and resource schedule. The end result will be improved decision-making, increased profitability, higher utilization, and reduced waste and overhead.

DI ACCELERATOR BUNDLE

The DI Accelerator Bundle is the first complete data integration starter kit offered for a LIMS. Designed for use with LABVANTAGE, SQL*LIMS, and DecisionScapes, the bundle will jumpstart any data integration or migration project. Included is the expressor data integration software, training for two persons, LABVANTAGE Semantic Universe, DI Workbench, and includes 1 year of support and maintenance. The bundle offers a *20% discount off of the list price*.

LABVANTAGE SEMANTIC UNIVERSE

Representing over 6 weeks of development by a certified expressor developer, the Semantic Universe allows an organization to skip all of the data architect and data stewardship work for both LABVANTAGE and SQL*LIMS database schemas. The Universe *contains over 7,000 expressor metadata artifacts*. These are the very same artifacts that LABVANTAGE will use to migrate SQL*LIMS customers to the upcoming LABVANTAGE 6!

DI WORKBENCH

The DI Workbench bulk generates metadata artifacts for any database schema. The Workbench automates manual tasks and completes within hours what might take weeks to accomplish. The Workbench provides heuristics for identifying semantic names using both underscore characters and natural language definitions and allows the user to add custom words and abbreviations to the internal dictionary so as to improve the identification of semantics in table and column names.

EXPRESSOR DATA INTEGRATION SOFTWARE

LABVANTAGE is proud to be a Premium Solution Provider and reseller of the expressor data integration software. expressor is an affordable, innovative data integration platform that accelerates data integration projects through ease of use, semantic name recognition, and metadata re-use. Costing up to 80% less than comparable data integration products, expressor offers enterprise-quality scalability and performance.

STRATEGIC SOLUTIONS CONSULTING

Available at a daily rate, Strategic Solutions consultants are available for projects involving data integration services, specialized LIMS migrations, laboratory technology infrastructure, laboratory informatics strategy, workflow redesign & process improvement, virtualization, cloud computing, and more.

expressor software provides free and affordable, enterprise-class ETL and data integration software that is fast and easy-to-use. Their active metadata foundation simplifies data mapping and transformation, thereby dramatically lowering cost. LABVANTAGE has partnered with expressor to bring affordable, enterprise-class data integration and migration solutions to the laboratory.

SHI is a global provider of information technology products and services. From software and hardware procurement to deployment planning, configuration, data center optimization, cloud computing and IT asset management, SHI offers custom IT solutions for every aspect of your environment. LABVANTAGE leverages SHI's cloud infrastructure to deliver Software as a Service (SaaS) informatics solutions to our clients.

Tableau Software offers a new approach to business intelligence—rapid-fire BI. While traditional BI platforms perfected scheduled, parameterized reports, they do not do what they now espouse: provide self-service business intelligence. Tableau allows users of all levels to ask and answer questions themselves – in a matter of seconds. Rapid-fire BI lets business users explore and analyze their data independently, while reducing the burden that heavy BI platforms place on IT. LABVANTAGE has partnered with Tableau to bring the benefits of rapid-fire BI to the laboratory.

VANTAGE POINT BLOG

LABVANTAGE's blog, Vantage Point, is dedicated to sharing our expertise, experience, insights and stories about laboratory informatics. The blog articles are written by the informatics experts at LABVANTAGE, and you may even hear on occasion from invited industry experts.

Our focus is simple -- helping our readers make the most of the information that is generated in their laboratories and fully leverage the systems that collect, generate, process, and present this information.

WE WANT TO HEAR FROM YOU!

Vantage Point also serves as a forum for you to make your voice heard. So come and interact with us today by commenting your opinions, thoughts and innovative ideas at:
